Preface	xiii
Notation and conventions	xix
Chapter 1. Special relativity and Minkowski spacetime	1
1.1. Lorentz transformations	1
1.2. Kinematics in Minkowski spacetime	15
1.3. Energy and momentum	24
1.4. Some geometric aspects of Minkowski spacetime	32
Exercises	36
Chapter 2. The Einstein equation	47
2.1. Newtonian gravity	47
2.2. From the equivalence principle to general relativity	49
2.3. The Einstein equation	58
2.4. Spacetime examples	82
Exercises	100
Chapter 3. Basics of Lorentzian causality	107
3.1. Preliminaries from Lorentzian geometry	107
3.2. Causality relations	109
3.3. Causality conditions	110
3.4. Achronal sets	112
3.5. Cauchy hypersurfaces	114
3.6. Domains of dependence	117
3.7. Cauchy horizons	119
Exercises	120
Chapter 4. The Penrose singularity theorem	123
4.1. Jacobi fields and focal points	123
4.2. Riccati and Raychaudhuri equations	124
4.3. Proof of Penrose's singularity theorem	129
Chapter 5. The Einstein constraint equations	133
5.1. Introduction	133
5.2. The Einstein constraint equations	139
5.3. The initial value formulation for the vacuum Einstein equation	144

<b>Exercises</b>	<b>161</b>
<b>Chapter 6. Scalar curvature deformation and the Einstein constraint equations</b>	<b>167</b>
6.1. A primer on elliptic PDE	168
6.2. Solving the constraint equations: the conformal method	194
6.3. Scalar curvature deformation on closed manifolds	205
<b>Exercises</b>	<b>214</b>
<b>Excursus:</b>	
First and second variation of area	219
<b>Exercises</b>	<b>225</b>
<b>Chapter 7. Asymptotically flat solutions of the Einstein constraint equations</b>	<b>231</b>
7.1. Harmonically flat solutions of the constraint equations	232
7.2. Asymptotically flat initial data	245
7.3. Harmonically flat asymptotics	282
7.4. On the positive mass theorem	285
7.5. Localized scalar curvature deformation and asymptotics	290
<b>Exercises</b>	<b>304</b>
<b>Chapter 8. On the center of mass and constant mean curvature surfaces of asymptotically flat initial data sets</b>	<b>319</b>
8.1. Introduction	319
8.2. Uniqueness of embedded CMC surfaces	324
8.3. Stable CMC surfaces	327
8.4. Existence of CMC surfaces in asymptotically flat initial data sets	331
8.5. Stability and foliations	340
8.6. Density theorems	348
<b>Chapter 9. On the Riemannian Penrose inequality</b>	<b>357</b>
9.1. Introduction	357
9.2. Preliminaries	358
9.3. Lam's proof of the RPI (and PMT) for graphs, in arbitrary dimensions	360
9.4. Huisken and Ilmanen's proof of the RPI using IMCF	364
9.5. Bray's proof	375
<b>References</b>	<b>383</b>
<b>Index</b>	<b>395</b>
